

New BF the answer to customers' needs

MB S.p.A presented the new version of its bucket crusher at the Paris trade fair Intermat, held from April 20-25. The new bucket crusher is the result of ongoing investments in technological research and the continuous attention to its customers' needs.

MB S.p.A is committed to the constant satisfaction of customers' requirements, and carefully listens to their customers' problems faced every day on construction sites. The company prides itself on finding solutions most suited to the various international situations in which it operates.

MB S.p.A's work ethic and quality machinery fosters long-lasting

relationships and client loyalty, and their support means its bucket crushers represent a valid work tool. The new version of the bucket crusher is in fact more resistant in work, featuring a more compact size and improved structural layout to facilitate operator manoeuvres on the excavator.

Despite the world crisis affecting all sectors, MB confirms its success and keeps on investing in research and development, giving priority to vertical specialisation in the production of a single product that enables the guarantee of high quality and top performing bucket crushers. Also, company participation in major national and international events in this sector has enabled MB to establish and strengthen relationships

and loyalty with clients, who always receive special attention. ■
