

The only certainty at the Intermat Trade Fair: MB Shall be the talk of the town!

The Crusher Bucket no. 1 in the world conquers Paris: for the fourth time MB, the world leader for the manufacturing and sale of the widest range of crusher buckets and screening buckets, will be present at the Intermat trade fair, one of the most important appointments, at world level, for the sector.

Great news this year for MB: besides an internal stand (Hall 6 – Booth no. J 020) where the company will exhibit its range of products, it will be possible to attend a real live demo in the set up test field of the Demo Area E2 (Paris Demo G07).

For the 2015 edition, in fact, MB has doubled the demonstration area,

setting up a real operational worksite, with its machinery at work: the crusher bucket model BF90.3, the screening bucket model MB-S18 and the crusher bucket MB-L160, in operation on a skid loader. Three unique pieces of machinery, versatile and certified, which allow those who use them to save time and money, as well as to be ever more competitive on the market.

Besides, at Intermat MB will show its latest equipment, two really new models of crusher buckets: the BF 80.3, suitable for excavators exceeding 18.5 tons, versatile and indicated for the crushing and recycling operations of inert materials or materials resulting from demolitions; and the BF135.8, the ideal bucket for the crushing in the quarry and in the waste dumps for the operations of recycling of inert materials. Suitable for excavators with a weight of over 43 tons, it achieves a yield of 75 cubic meter/hour and a capacity of about 1.60 cubic meters.

A great appointment, therefore, absolutely not to be missed, exactly because there will be the possibility of seeing and experiencing at first hand the MB products while in operation.
