

# MB Crusher turns mobile plants into one-machine operation

By reusing the materials, contractors and businesses can begin saving time and money in reducing waste and trucking costs.

People often say go big or go home. MB Crusher – together with its branch office MB America, Inc. – has been big this year at CONEXPO-CON/AGG 2017 in Las Vegas, crushing and screening with an excavator and skid loader, turning each equipment into its own one-machine mobile plant.

Where every major construction industry has been represented among more than 2,500 exhibitors over 2,500,000 sq ft and more than 150 education sessions including asphalt, aggregates, concrete, earthmoving, lifting, mining, utilities and more, CONEXPO-CON/AGG brought construction professionals from across all disciplines.

In 2017 edition, MB Crusher has been demonstrated to attendees how quickly they can have a mobile plant at their work site by switching between the crushing and screening attachments. Since last ConExpo in 2014, MB Crusher has expanded its product line to include a new line of screening attachments designed for skid loaders, loaders and backhoes; 360-degree rotation grapples; and dual head rotary drum cutters.

At its demo area at CONEXPO-CON/AGG, MB Crusher featured four machines, crushing and screening concrete debris and granite rocks: the BF120.4 crusher attachment and the MB-S18 screening attachment on an excavator, and the MB-L140 crusher attachment and MB-LS140 screening attachment on a skid loader.

In addition to the live demonstrations, MB Crusher had its drum cutter and grapple models on static display. Both product lines

were introduced in late 2015 and early 2016.

MB Crusher's attachments use the hydraulic system on excavators, skid loaders and backhoes, and allow contractors the flexibility to work in tight areas, difficult access locations, steep slopes and urban areas.

Contractors will be able to reuse materials immediately at the job site and provide a greener option in recycling waste materials. By reusing

the materials, contractors and businesses can begin saving time and money in reducing waste and trucking costs.

MB Crusher is a leading manufacturer of equipment, machinery and accessories for the construction, demolition and recycling industries. Applicable to any type of excavator, MB Crusher products are the most effective means in constructions and excavations, but also in special

applications such as quarries, mines and environmental rehabilitation, for crushing, screening and separating inert materials directly on site to reuse it or allocate it to other uses. Crusher bucket, screening bucket, grapple and drum-cutter are an ever-expanding range of products strictly certified, whose use reduce costs, processing times and transportation of materials, while contributing to the environment. ■
