

A CRUSHING BUCKET HELPS INCREASE RECYCLING ON PROJECTS, IMPRESSES A LOCAL AUTHORITY & ADDS A NEW REVENUE STREAM

JPS Contractors are saving time and money by recycling materials on site, with the help of a Crushing Bucket from Worsley Plant.

JPS Contractors Ltd is a family run firm of civil engineers offering a range of services including groundwork and surfacing, roadworks and car park works, excavation and filling. An established company of 15 years, they have been offering a full range of services across Surrey and the surrounding areas.

After seeing MB Crushing Buckets in action at the Plantworx show, JPS became interested in how these could help them make things easier on their projects. They could see the huge potential for saving time and money.

Shortly afterwards, Worsley Plant delivered an MB Crushing Bucket to JPS so they could run a trial on a job they felt would make great use of the equipment. They were so impressed with the results they decided to invest in a reconditioned MB BF60 model to use with their excavator.

JPS could also see the benefits of working with both a crushing and screening bucket on some projects. Screening material before crushing makes things easier and allows a higher percentage of re-use of the crushed materials. The screened out soil can also be re-used too. At the moment they hire in screening buckets for specific jobs but may look to invest in the future as they see this as a winning combination for the future.

Liam, one of the operators for JPS, told us about a particular job where the Screening Bucket was utilized and impressed the customer.

JPS do a lot of work for local authorities. One particular job they used the Crushing Bucket on involved demolishing some old garage blocks previously used by the nearby housing. This was then to be replaced with a car park. By using their MB bucket on site, they were able to crush the waste from the garages and use it as sub base. This meant they didn't need to buy in brick block concrete saving the local authority money and impressing them with the recycling element of the job.

Liam says: **“MB Crushing Buckets are very useful, productive buckets, producing a great sample and allow 100% recycling of materials on site. Before we bought ours we researched all the makes on the market and decided there was only one crushing bucket worth investing in – the MB bucket from Worsley Plant! There’s no doubt about it, it has changed the way we look at jobs.**

We also now offer our recycling services (excavator, operator and MB bucket) out to developers which has given us an additional revenue stream.”
