EQUIPMENT TO HELP PRODUCERS REBUILD AMERICA

REMco

Need sand? Most aggregate producers need to produce better sand, but often their system falls short when it comes to meeting demanding specifications for asphalt sand or C-33 concrete sand. Existing stockpiles of sand can be coarse; unsaleable materials accumulate and become a dead asset. All of this costs money to mine, process and inventory, and it goes on for years because of the false belief that high quality sand cannot be manufactured economically. Not so! The REMco SandMax has changed all of that!

To find out more, visit REMco's web site or call 925-447-0805.

MB Crusher

The company's jaw-action crusher buckets are designed for quarrying, mining, excavation, demolition, rock crushing, reclamation, building construction and road construction. The crusher bucket is designed to make on-site work less labor-intensive, more productive and economical. The crusher bucket is available in four versions: BF60.1 (suitable for excavators weighing 8 to 14 tons), BF70.2 (suitable for excavators of 14 to 20 tons), BF90.3 (suitable for excavators of 20 to 28 tons) and BF120.4, the largest model in the series line (suitable for excavators greater than 28 tons).
