

GREAT INNOVATIONS

for the record-breaking bucket

For the undisputed world leader in the production and sale of equipment for earthmoving and demolition the Vicenza-based company, in fact, has prepared two significant updates in the existing range.

MB-S18 - Doosan - Australia

MB-S18

excavators between 20 and 35 tons, the renewed MB-S18 S3 model is now available with a nebuliser and iron separator, two accessories that increase versatility while allowing it to be used in inhabited areas thanks to the suppression of dust. Compared to its predecessor, the new MB-S18 S3 is more compact, balanced and easier to maintain.

In 2001, MB became the first company to conceive the jaw crusher bucket, for which it received international patents. Since the beginning the bucket crusher has offered revolutionary characteristics with fabrication at the highest standards in the market, for instance with the extensive use of Hardox inside.

Once again, MB has confirmed its successes and continues to invest in research and development, focusing on the specialisation of unique, high quality products offering superior performance. Competitive products that add value to the construction site, resulting in reduced operating costs and real savings, in terms of time and efficiency. 🐾

The historic model from the range of crusher buckets, the BF90.3, has been overhauled with a third series. Once again MB did not hold back on innovation and introduces a more compact, robust and productive crusher bucket that can be maintained quickly and easily. Suitable for excavators over 21 tons in weight, the BF 90.3 S3 crusher bucket is

particularly suitable for recycling operations involving any type of inert material or demolition waste (road works – excavations – pipelines – ducts). Despite its size and reduced weight compared to larger models, the BF90.3 S3 achieves a production capacity of 41m³ per hour.

Even the line of screening buckets has been renovated, with the MB-S18 third series model: suitable for

SOLUTIONS AND INNOVATIONS

FOR CRUSHING AND RECYCLING

**SERIES
BF**

**COMPACT
AND VERSATILE**

Full range that start with the first **BUCKET CRUSHER** patented and produced by MB in 2001. Turn into a crusher any excavator model.

**SERIES
MB-L**

**HANDY
AND EFFICIENT**

Created to meet the needs of **crushing with, skid steer, loaders and backhoe loaders**, guaranteeing high performance as the entire range of crusher buckets MB.

**SERIES
MB-S**

**GREAT
PERFORMANCES**

MB **SCREENING BUCKETS** are equipped with **baskets formed by interchangeable modular panels**, available with different size holes on demand.
