

# SEMCO TO DISTRIBUTE MB CRUSHERS

**MB has the largest line of patented crusher buckets, and now offer crusher buckets for excavators, skid loaders and loader backhoes.**

The Italian manufacturer MB S.p.A. has appointed Semco Equipment Sales as distributor for Queensland, New South Wales, Victoria, Tasmania and New Zealand. Under the distribution arrangement, Semco will sell, service and support the MB Crusher range of specialised buckets in the region. Distribution in the western and central states will continue through DM Breaker in Perth.

Graham Murphy of Semco says: "We are very pleased with the MB Crushers appointment which will enable us to assist our customers achieve the full productivity potential of their current equipment fleet as well as adding flexibility to future equipment purchases."

## WORLD-LEADING BRANDS

"Distribution of MB Crushers is an excellent fit with our policy of building the Semco brand portfolio with world-leading, proven and trusted brands. Customers benefit from our ability to provide expert installation including any required modifications to the host machine for optimal performance. We also offer new and used equipment, service, parts, engineering and technical support from our distribution centres in key markets.

"MB Crushers is an acknowledged world leader in bucket crusher technology. The company has an outstanding approach to quality and manages all manufacturing processes from research and development to production and sales. MB controls the complete supply chain to ensure its products conform to the highest 'Made in Italy' quality standards," Graham says.

Crusher and screening buckets allow operators and contractors to reprocess materials in situ, helping reduce the load on the environment by making useful by-products of otherwise low value raw feed, which may add significantly to their profitability. In urban areas the carting and dumping costs alone often mean a fast ROI, and in rural areas it can mean producing very useful and valuable materials in places where buying materials is often prohibitively expensive.

## PRODUCTIVITY BENEFITS

A high performance crusher or screening bucket has the advantage of being able to recycle materials onsite without having to find a suitable dump. There is also the opportunity of on-selling aggregates produced by this process to customers within the industry. Crushed bricks for example can be turned into decorative aggregates in the required particle sizes.

MB's range of products includes crusher buckets, screening buckets and grapples. Crusher buckets are supplied in sizes to suit four tonne to 70 tonne OP operating weight host machines and its range of screening buckets cover machines in the 2.6 tonnes to 35 tonnes operating weight range.

## MB CRUSHERS

For over 15 years MB has been a leader in the fields of crushing, demolition and recycling, by designing, producing and selling the very first jaw bucket crusher. Since 2001, MB globally has offered the largest line of patented crusher buckets. With extensive innovation and development, MB now offers crusher buckets for excavators, skid loaders and loader backhoes.

A family owned business, MB is internationally recognised for its quality products. Founded and headquartered in Italy, the company owned the first worldwide patented crushing bucket. It operates globally through seven international subsidiaries with logistics centres located on different continents, as well as an extensive network of authorised dealers and service support throughout the world.
